Preface

1 Chapter 1

1.1 Operationalize oTree to deploy IGG

1.1.1 App

My first application

1. To create an application named **game_app** move to the oTree folder
 - `cd oTree`
2. Create the application
 - `otree startapp game_app`
3. Move to the folder **game_app**
4. In this folder, you will find the following files as default
 - `models.py`
 - `pages.py`
 - `tests.py`
5. In this folder, you will also find a subfolder
 - `templates/game_app`
 - `Mypage.html`
 - `Results.html`

1.1.2 Models.py

A model is basically a database. Here we define the structure of the data. For instance, in a three data models. This is python **class**

- Subsession
- Group
- Player

1. class Subsession(BaseSubsession):

- pass

2. class Group(BaseGroup):

- pass

3. class Player(BasePlayer):

- pass

1.1.3 Pages.py

- Pages that the participants see are defined in pages.py
Logic for how to display the HTML templates
when, how, and what to display
- page_sequence gives the order of pages

If there are multiple rounds the sequence is repeated

For instance,

1. class MyPage(Page):

pass

2. class ResultsWaitPage(WaitPage):

def after_all_players_arrive(self):

pass

3. class Results(Page):

pass

- `page_sequence = [MyPage, ResultsWaitPage, Results]`

2 Chapter 2

3 Chapter 3

4 Chapter 4

5 Chapter 5

6 Chapter 6

7 Chapter 7

8 Chapter 8

9 Chapter 9

10 Chapter 10
